

Aircraft Purchasing & Leasing

Acquiring or leasing an aircraft is one of the most significant investments an aviation organization or private owner can make. CO Aviation Consulting provides expert guidance throughout the entire aircraft acquisition and leasing process, ensuring clients make informed decisions that align with their operational requirements, financial objectives, and long-term business strategy.

We assist clients in identifying suitable aircraft based on mission requirements, operational demands, passenger capacity, maintenance considerations, and budget constraints. Our team conducts market research, aircraft evaluations, and comparative analyses to help clients understand the advantages and risks associated with different aircraft types and ownership structures.

For organizations considering leasing solutions, we provide advisory services on lease negotiations, lease return conditions, contract reviews, and fleet planning strategies. We also support technical evaluations, pre-purchase inspections, maintenance records reviews, and aircraft acceptance processes to ensure clients receive maximum value from their investment.

Services Include:

- Aircraft acquisition support
- Aircraft leasing advisory services
- Fleet planning and analysis
- Market research and aircraft sourcing
- Aircraft valuation support
- Technical due diligence
- Pre-purchase inspections coordination
- Lease negotiation support
- Aircraft delivery and acceptance management
- Fleet modernization strategies

Our objective is to reduce risk, maximize investment value, and ensure clients acquire the right aircraft solution for their operational goals.
